Conception Phase

The purpose of this project is to develop a car rental website aimed at individuals looking to rent a car. The website will feature a wide range of vehicles, allowing users to explore various options based on model, color, year, transmission type, and price range. Users will be able to browse the available cars and book the one that best fits their needs. The technologies used in this project include HTML, CSS, and JavaScript for the frontend, while MySQL, Java, and Spring Boot will be utilized for the database and backend API.
